

Agriculture

Harvest your energy savings

Cultivate your agriculture business by increasing profits and decreasing energy waste with the Consumers Energy Agriculture Program. Energy can account for up to 34%* of your agricultural business cost. Reduce your energy costs by up to 30%* by pursuing a USDA Tier II Audit, supported by Michigan State University (MSU) Extension – Michigan Farm Energy Audit Program and by installing energy efficient equipment.

MSU estimates less than 0.02%* of Michigan agricultural businesses have participated in an energy audit. Capture real savings through energy efficiency programs and even reap the benefits beyond the cost saving.

Additional Benefits

Installed LEDs have a positive impact on livestock.¹

Installed VFDs on irrigation can increase yields.

Improved lighting levels increase poultry profits.²

Thermal curtains optimize temperatures so plants can grow to their maximum potential.*

Consumers Energy
Count on Us®

Save 60% or more in energy use by installing LED lighting. It lasts over 50,000 hours and instantly turns on to full brightness in low temperatures.

Increase efficiency by over 20% using heat recovery systems on natural gas grain dryers, resulting in higher profit from corn or other crops.

75% natural gas savings from installed greenhouse heat curtains generally achieves payback in 1 to 4 years.

Save up to 20% in energy costs on irrigation systems with VFDs.³
